EDUCATION

University of Waterloo — Expected 2031
Computer Science (Co-op) · Computational Mathematics

Delhi Public School – Modern Indian School, Doha — Graduated 2026
CBSE Senior Secondary, Computer Science

PROJECTS

CircuitGuard — Python · FastAPI · React · Three.js
Winner, Ampere – AI for Motor Safety · FormulaTech Hacks 2026

- Real-time Formula 1 safety system: analyses live driver telemetry to detect crashes and stopped cars on the racing line and recommends the FIA response (safety car, VSC, red flag) under the 2026 sporting regulations.
- Models per-sector spectator risk with a Bayesian Monte Carlo insurance-pricing model, so premiums can reflect each track section instead of a blanket rate.
- Python/FastAPI backend on the OpenF1 API, FAISS semantic search over FIA regulations, faster-whisper radio transcription, Next.js/React 3D track view.
- Built with a team of four at FormulaTech Hacks 2026 (University of Waterloo).

MUN Chair Toolkit — TypeScript · React · Vite · Tailwind · Zustand · Dexie
Local-first web app for Model UN chairs

- Committee-management app for Model UN chairs: committee and agenda setup, bulk delegation entry, and roll call with Present, Present and Voting, and Absent states.
- Automated quorum, simple-majority and two-thirds calculations, so chairs no longer count votes by hand.
- Kept rules in framework-free functions (src/lib/rules.ts) with automated tests; GitHub Actions workflow for checks.
- Stores everything in the browser with IndexedDB, so it works offline with no account or backend.

Track Nector — Python · HTML · JSON · Render
Self-hosted personal finance tracker

- Lightweight tracker for card balances and daily spending built around manual entry, with no bank account linking.
- Chose self-hosting and manual input deliberately to keep financial data private.
- Wrote the account logic in Python (bank_account.py) and added Render deployment config; 11 commits.

Corso Website — HTML · Bootstrap · Sass · JavaScript
Responsive training-courses site

- Responsive site for courses and workshops: sticky navbar that changes on scroll, image carousel, registration and email-subscribe forms.
- Compiled styles from Sass with npm scripts for build and watch.

Source code available **on request**.
